*Compressible Limb Sleeve Device*

# Healing Through Innovation

ManaFlow™ 51 is a vascular therapy system comprised of a gradient compression sleeve with an intermittent pump that applies compression and pressure to the calves to treat lymphedema, edematous conditions and to prevent Deep Vein Thrombosis.

## Features & Benefits

- Intended for use at home or in the hospital
- Pre-set to a pressure of 50mmHg that cannot be adjusted
- Up to 9 hours of battery life before needing a recharge
- Portable and lightweight
- Features a compliance monitor to help patients track their usage
- Designed with a pressure monitor to display current pressure

## Common Examples of Use

- Treatment of lymphedema
- Treatment for chronic venous insufficiency
- Reducing edema due to venous stasis
- Enhances venous return
